Welcome to The Face of Dentistry

## Hard Science, and a LiteTouch

The new face of dentistry represents a kinder more progressive approach to dental care. LiteTouch dental laser personifies that approach with gentle treatments that usually don't require anesthesia and minimize recovery time.

The LiteTouch design team worked hand in hand with dentists to create a truly superior dental laser system. The system reflects meticulous attention to the type of details that are crucial to the dental practitioner. At the same time, its design reflects a supreme commitment to quality and reliability.

## When Less Gives You More

Three times smaller than any other dental laser, LiteTouch is compact, light and portable. Easily moved and tucked away, the system saves all-important floor space and can be conveniently integrated into any clinic environment, large or small.

*"We have many treatment rooms in our clinic so the LiteTouch's small size, weight and simple plug-in connection was a big advantage for us. I found the hand piece works very much like a high speed drill and is very comfortable to use. Also, the fact that I don't have to worry about damaging a fiber cable gives me a lot of freedom to move during treatment."*

Mark Levin D.D.S., Medi Clinic

## A Masterpiece at Hand

Convinced of the central importance of the hand piece, LiteTouch's designers crafted an elegant, ergonomic piece that incorporates the dentist's top priorities. The hand piece has the look and feel of a high quality turbine drill. Its head incorporates a 360 degree swivel, giving the practitioner complete freedom of movement within the oral cavity. The flexible cable allows for maximum treatment angles and feather-touch accuracy.

User-friendly, resilient and quiet, this hand piece is, above all, at hand when the practitioner needs it. Unlike the shrill sound of conventional drills that heightens many people's fear of dentistry, LiteTouch's gentle, noise-free treatment reassures anxious patients, creating a calm and relaxed environment.

## Direct Laser Delivery

The laser is housed in the handpiece, completely eliminating the need to replace costly fiber cables. This innovative handpiece setting makes laser maintenance fast, easy and cost-effective. Dental practitioners have maximum maneuverability and the freedom to smoothly switch wavelengths during a procedure.

## Ultimate Control

Based on the one-screen software concept, the LiteTouch control panel is informative, simple and straightforward. During treatment dentists see instantly within which parameters they're working without having to read numbers or process information. Just a quick glance at the screen shows what you're doing, while you're doing it. Granting maximum control and versatility, the control panel enables users to choose between pre-programmed treatments or create their own custom settings. True to its name, LiteTouch allows dentists to make adjustments during treatment with the simple press of a button. The system's easy-to-clean glass screen tilts sideways and vertically so that information can be clearly read from most angles, without any glare getting in your way.

## Watch Your Practice Grow With a LiteTouch

No longer forced to send out patients for special treatments, you eliminate migration from your practice and gain referrals from less-equipped practitioners. You expand your services and deliver them faster than ever before. Along with this increased patient base and improved throughput, you gain a reputation for bold innovation. The result: boosted practice and revenue growth. LiteTouch helps you give your patients what they demand. It offers a variety of effective treatments with less pain and shorter healing times. There is little or no anesthesia necessary with and minimal bleeding. Precise and selective, LiteTouch treats targeted areas while conserving tooth structure, leaving healthy tissue unaffected. In short, LiteTouch provides a safe, non-invasive treatment with results that exceed conventional methods.

## The Advantage of a LiteTouch

- The LiteTouch dental laser system has FDA approval for procedures performed in oral, maxillofacial surgery and dentistry on both hard and soft tissue.
- Compact and lightweight design saves valuable floor space.
- Quiet operation creates a relaxing treatment environment.
- Ergonomic turbine-like hand piece familiarizes treatment and enables feather touch accuracy.
- Direct delivery laser-in-the-hand piece eliminates costly fiber replacements.
- Intuitive one-touch, easy view control panel grants maximum control and versatility.
- Dual Erbium and Diode laser expand treatment and application options.
